

### **Product designation**

**Reflector Satellite Staro**

Article no. 33.151.00

### **Product description**

The reflector Satellite Staro is a special light source with soft but brilliant light with high light output. Due to its round shape and a diameter of 90 cm it provides perfect, clear shadows. The exact amount of diffused light is attained by means of a matted sheet of plexiglass.

The panels can be attached, with the clips, on the edge of the Satellite reflector. Satellite Staro can be operated with the lamp bases F2/F4 and Primo as well as with the compact units Minipuls C40/C80.

### **Scope of delivery**

Reflector Satellite Staro with bracket and mat plexiglass diffuser

The lamp base F2/F4, Primo or Minipuls C have to be ordered separately.

### **Technical data**

F-stop at 2 m, 100 ISO, 3200 J	45 2/10
Weight (with bracket)	10 kg
Dimensions	88 x 25 cm

### **Compatibility**

Lamp bases	Pulso F2/F4, Pulso G, Primo
Compact units	Minipuls C40/C80, Minicom 40, 80 Minicom 40 RFS, 80 RFS

For thermal reasons, the use of the lamps Pulso Twin, Pulso 8 and broncolor HMI F575 is only possible without the diffuser. Due to its weight the compact unit Minipuls C200 is not recommended.

### **Accessories**

Art.-no. 33.209.00	Honeycomb grid to Satellite Staro
Art.-no. 35.110.00	Senior stand AC
Art.-no. 35.113.00	Compuls standAC

Can be mounted to the Hazylight/Flamingo stands by means of mounting set art. no. L5992.00.

### Special features

The surface of the plexiglass diffuser is matted to prevent disturbing reflections. The round shape guarantees perfect shadows and natural highlights.

### Application

The Satellite Staro not only features a round shape but also offers a light character which is ideal for tabletop, food, beauty and fashion photography. Due to the round shape, any reflections in the eyes or glossy parts of motives are corrected naturally and flawlessly. Compared to other light sources of this category, it offers well directed light with homogenous shadows and good detailed reproduction.

Concerning the 5 most important characteristics the Satellite Staro provides the following light:

- |                              |   |
|------------------------------|---|
| - Illumination of a surface: | absolutely homogenous   |
| - Bright-dark transition:    | very soft   |
| - Sharpness of the shadow:   | precise, but for bright-dark transition                       |
| - The depth of the shadow:   | large   |
| - Highlights:                | round, sharply defined, flawless and slightly centre focussed |
